

Mid-Length Sockets

The GearWrench Mid-Length Socket range is designed to enhance productivity by offering greater access in difficult applications where a deep socket is necessary but is too long to give the clearance required. Both the 1/4" drive mid-length sockets and the 3/8" drive mid-length sockets are 0.7" shorter than the equivalent GearWrench deep sockets, giving this extra clearance. In addition to offering access, this line of sockets includes the features that users have come to expect from GearWrench and deliver on the brand promise of greater speed, strength and access.

Speed

- Angled entry guides the socket on to the fastener
- Full polish for easy cleaning and visibility
- Double line (SAE) & knurled line (mm) to easily identify standard versus metric sockets
- Large hard-stamped size on both sides for fast, easy identification

Strength

- Surface Drive® contact points virtually eliminate the rounding of fasteners

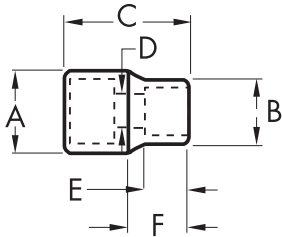

Access

- Mid-length sockets are intended for use when a standard socket is not long enough to give access, but a deep socket will not fit in the space available
